HIGHLIGHTS California's seasonally adjusted unemployment rate dropped again this month to 10.1 percent while the national rate rose to 10.1 percent — the highest it has been since prior to World War II. A year ago in September of 1981, California's seasonally adjusted rate was 7.4 percent and the national rate was 7.6 percent. During September, the number of people employed in California increased by 145,000 while unemployment decreased by 15,000 persons. The unemployment rate for prime age workers (25—64) dropped from 8.8 percent to 7.7 percent while unemployment among youth (16—19) increased from 22.7 percent to 26.3 percent.

The total nonagricultural wage and salary employment, not seasonally adjusted increased by 54,600 during September. However, the seasonally adjusted data indicates that total emloyment decreased by 26,200 during the month. Employment in the construction industry continued to decline; dropping to 371,500 during September. Since September of 1981 employment in the construction industry has fallen by 64,300. The number of people employed in manufacturing also continued to decline. Since September of last year, there are 116,800 fewer people employed in manufacturing. Especially hard hit are the lumber and wood products industries where employment is off 20 percent over the year. The total employment in most other sectors remained fairly constant with the exception of government where employment in education increased with the start of the new school year. The average weekly earnings in manufacturing increased to $367.00 where the average number of hours worked decreased to 39.3 during September.

HIGHLIGHTS California's seasonally adjusted unemployment rate rose this month to 10.7 percent while the national rate increased to 10.4 percent. During October, the seasonally adjusted number of people employed in California decreased by 75,000 persons while unemployment increased by 81,000. The unemployment rate, not seasonally adjusted, for prime age workers (25-64) increased from 7.7 percent to 8.3 percent, while the rate among nonwhites increased from 13.4 percent to 14.5 percent. The number of reentrants decreased from 262,900 in September to 252,700 in October while the number of job losers increased from 680,600 to 779,800.

Total nonagricultural wage and salary employment, not seasonally adjusted, dropped slightly this month. The seasonally adjusted data indicate a drop in employment of 17,100. Over the year, the unadjusted monthly data show total wage and salary employment falling by 165,400 or 1.6 percent from October of last year. With the exception of Government, every major sector of the California economy shows a reduction in employment this month. Within the Government sector, employment increased by 59,900 over the month, primarily reflecting increases in education with the start of the new school year. The average weekly earnings in manufacturing dropped slightly to $366.00 as the average number of hours worked declined from 39.3 to 39.0.

HIGHLIGHTS California's seasonally adjusted unemployment rate rose to 11.2 percent in November. The rate for October was 10.7 percent. The U.S. seasonally adjusted unemployment rate increased from 10.4 percent in October to 10.8 percent in November. In California the unadjusted unemployment rate for prime age (25—64 years old) workers increased from 8.3 percent to 9.0 percent. The number of job losers continued to rise; 61.3 percent of the unemployed were job losers in November 1982 as compared to 45.9 percent in November 1980.

Total nonagricultural wage and salary employment dropped by 4,800 in November to 9,950,800. The seasonally adjusted data indicates a decline of 30,200 since October. Over the year, the unadjusted data indicate a decline in wage and salary employment of 188,000 or 1.9 percent from November of 1981. The number of jobs in construction and manufacturing continue to decline. Employment in construction dropped below 350,000 — a decline of 19.5 percent since November of 1981. In the manufacturing sector employment is down 111,000 during the last twelve months. The number of jobs in retail trade increased seasonally, but less than normal during November. The average weekly earnings in manufacturing remained constant at $366.00. Average hours worked per week increased slightly over the month from 39.0 to 39.1 hours, but remained at a historically low level for October.

HIGHLIGHTS The California seasonally adjusted unemployment rate dropped by 0.1 percentage point over the month to 11.1 percent in December; the seasonally adjusted rate for the nation remained unchanged at 10.8 percent. In December, seasonally adjusted employment in California was 10,859,000 which was up 10,000 from November while unemployment was 1,356,000, down 16,000. The unemployment rates for most groups remained relatively unchanged over the month: Prime Age Workers with 9.2 percent; Hispanics with 15.6 percent; Blacks with 21.2 percent; Youth Aged 16-19 with 24.6 percent; and Females with 9.9 percent.

Total nonagricultural wage and salary employment increased to 9,976,100 during December as a result of the usual seasonal increase in retail trade. When the data are seasonally adjusted, total employment actually was down over the month. During the last 12 months, the wage and salary data show an overall decrease in employment of 191,500. Employment in the construction industry continued to decline even more than would be expected during December offsetting slight gains in services, finance, and government. Over the month average weekly earnings in manufacturing increased by one dollar to $367.00 as the average hours worked increased to 39.3.

Prepared in cooperation with the Bureau of Labor Statistics and the Employment and Training Administration of the U.S. Department of Labor by the Employment Data and Research Division, Economic Analysis Group, 800 Capitol Mall, Sacramento, CA 95814.

HIGHLIGHTS With the exception of the county labor force data on table five, all of the data contained in this report reflect the most recent population and seasonal adjustments. California's seasonally adjusted unemployment rate was 11.0 in January, the same as the revised December figure. Starting with January of 1983, there is a new national labor force series which includes both civilian and military employment. The U.S. seasonally adjusted unemployment rate, including both civilian and military employment, was 10.2 percent, while the civilian rate was 10.4 percent. The average unemployment rate for California during 1982 was 9.9 percent compared to 7.4 percent in 1981 and 6.8 percent in 1980.

Total nonagricultural wage and salary employment decreased by 147,900 from December to a January 1983 total of 9,680,100 jobs. While all major sectors of the California economy experienced reduced employment, the number of jobs lost was less than was seasonally expected during January. The largest decline occurred in retail trade where approximately 80,000 jobs were lost at the end of the holiday season. During January, average weekly earnings in manufacturing increased to $376.00 and the average hours worked increased to 39.8.

Prepared in cooperation with the Bureau of Labor Statistics and the Employment and Training Administration of the U.S. Department of Labor by the Employment Data and Research Division, Economic Analysis Group, 800 Capitol Mall, Sacramento, CA 95814.

HIGHLIGHTS The California seasonally adjusted unemployment rate in February 1983 was 11.2 percent as compared to 11.0 percent in January 1983. The U.S. seasonally adjusted unemployment rate, which includes civilian and military employment, was 10.2 percent, while the civilian rate was 10.4 percent, the same as last month. In February, seasonally adjusted employment in California was 10,893,000 which was down 16,000 from January while unemployment was 1,370,000, up 17,000. The number (not seasonally adjusted) of persons losing their jobs increased from 886,100 in January to 916,100 in February.

Total nonagricultural employment was up 16,300 during February but most of this increase was due to seasonal influences. Employment in the construction industry continued to decline this month as the number of people employed dropped to 330,800, the lowest since February of 1977. Most sectors of the economy continued to experience employment losses except services and government where employment increased slightly. Following the usual seasonal pattern, average weekly earnings in manufacturing dropped to $368.00 in January 1983 as the average hours worked in manufacturing decreased from 39.8 in December of 1982 to 39.1 in January of 1983.

HIGHLIGHTS The California seasonally adjusted unemployment rate fell in March 1983 to 10.6 percent from 11.2 percent in February. The U.S. seasonally adjusted unemployment rate, which reflects the inclusion of military personnel in national labor force statistics, declined slightly in March to 10.1 percent compared to 10.2 percent in February, while the civilian rate dropped from 10.4 percent to 10.3 percent in March. In March, seasonally adjusted employment in California increased by 33,000, amounting to 10,926,000 for the month. Seasonally adjusted unemployment in California was 1,290,000 down 80,000 from February. The number (not seasonally adjusted) of persons among California's unemployed who lost their jobs declined from 916,100 in February to 869,200 in March.

Total nonagricultural wage and salary employment increased by 44,700 during March, however, most of this increase reflects normal seasonal factors. Since March of 1982, total nonagricultural employment has decreased by 133,600 jobs. Employment in the construction industry rose by 6,200 during March, but total employment in the construction industry is still 34,100 less than March of 1982. While all sectors of the California economy reflect employment increases during March, with the exception of the service industry, all sectors also reported employment levels below Marc a of last year. Average weekly earnings in manufacturing remained at $369.00 during February 1983, but well above the $353.00 reported during February of 1982.

Prepared in cooperation with the Bureau of Labor Statistics and the Employment and Training Administration of the U.S. Department of Labor by the Employment Data and Research Division, Economic Analysis Group, 800 Capitol Mall, Sacramento, CA 95814.

HIGHLIGHTS The California seasonally adjusted unemployment rate dropped to 9.8 percent in April 1983, down from 11.2 percent in February, and 10.6 percent in March. The U.S. seasonally adjusted unemployment rate, which includes military personnel in the national labor force, remained constant in April at 10.1 percent, while the U.S. civilian rate dropped from 10.3 percent in March to 10.2 percent in April. During April in California, the seasonally adjusted unemployment rose by 36,000 to 10,962,000 while unemployment dropped by 99,000 to 1,191,000. The number of persons unemployed who lost their jobs was 754,400 compared to 916,100 in February and 869,200 in March.

Total nonagricultural wage and salary employment increased by 45,500 during April. When the data is adjusted to eliminate normal seasonal increases, total employment increased by 24,600. With the exception of government, all sectors of the California economy continued to report increased employment. Only the service industries reported employment above the level of April 1982. Employment in construction increased by 16,900 during April and employment in the service sector increased by 12,900. Average weekly earnings in manufacturing increased to $372.00 during March 1983, up significantly from the $356.00 reported during March of last year. Average overtime hours per week in manufacturing increased from 2.3 hours in February to 2.6 hours in March.

Prepared in cooperation with the Bureau of Labor Statistics and the Employment and Training Administration of the U.S. Department of Labor by the Employment Data and Research Division, Economic Analysis Group, 800 Capitol Mall, Sacramento, CA 95814.

HIGHLIGHTS The California seasonally adjusted unemployment rate increased to 10.5 percent in May 1983, up from 9.8 percent in April 1983. The U.S. seasonally adjusted unemployment rate, which includes military personnel in the national labor force, was 10.0 percent, while the U.S. civilian rate dropped from 10.2 percent in April to 10.1 percent in May. During May in California the seasonally adjusted employment rose by 45,000, over the month to 11,007,000, while unemployment increased by 103,000 to 1,294,000. The number of persons unemployed in May who lost their jobs was 785,800 compared to 754,400 in April and 869,200 in March.

Total nonagricultural wage and salary employment increased by 43,100 during May. When the data is adjusted to eliminate normal seasonal increases, total employment increased by approximately 14,000. During May, all sectors of the California economy reported employment increases. Employment in the construction industry increased again this month—up 10,200 to 360,500. However, employment in construction is still below the level of May 1982. Over the year, total wage and salary employment has declined by 25,100 even though employment in the services industry increased by 52,900. Average weekly earnings in manufacturing increased to $376.00 in April of 1983, an increase of $4.00 from March of 1983 and well above $353.00 earned during April of 1982. The average number of hours worked per week in manufacturing increased to 39.7 as average overtime hours rose to 2.7.

b/ Range as shown is at the 90 percent level of confidence.

HIGHLIGHTS The California seasonally adjusted unemployment rate decreased to 10.3 percent in June 1983, down from 10.5 percent in May 1983. The U.S. civilian seasonally adjusted unemployment rate dropped from 10.1 percent in May to 10.0 percent in June. During June in California the seasonally adjusted employment rose by 166,000 over the month to 11,173,000, while unemployment decreased by 8,000 to 1,286,000. There was a shift in the composition of the unemployed; as the percent of job losers decreased and the percent of reenntrants and new entrants increased. This shift is mainly attributable to an increase in the number of discouraged workers reentering the labor force, and also partly due to the fact that there was a large number of youth entering the labor force with the beginning of summer vacation.

Total nonagricultural wage and salary employment increased by 76,100 during June. When the data are adjusted to eliminate normal seasonal increases, total employment increased by 25,400. During June, as in May, all major sectors of the California economy report increased employment. The largest increase occurred in agriculture, mostly seasonal, however construction, services, and wholesale and retail trade also showed gains. Since June of 1982, total wage and salary employment has increased by 26,100. Average weekly earnings in manufacturing remained constant at $376.00 while the average hours worked increased from 39.7 in May to 39.9 in June of 1983.

HIGHLIGHTS California's seasonally adjusted unemployment rate for July 1983 was 9.3 percent down from the 10.3 percent in June of 1983 and down from the 10.5 percent in July of 1982. The nation's seasonally adjusted civilian unemployment rate was 9.5 percent in July of 1983 down from 10.0 percent in June of 1983 and down from the 9.8 percent in July of 1982. The number of people employed in California totaled 11,147,000 in July 1983 compared with 11,173,000 in June of 1983 and 1,289,000 in July of 1982. Unemployment totaled 1,147,000 in July 1983 compared with 1,286,000 in June of 1982 and 1,289,000 in July of 1982. Of the 1,147,000 unemployed in July of 1983, 668,000 were job losers; 95,000 were job leavers and the balance were new entrants or re-entrants into the labor market. The number of persons unemployed for 15 weeks or more decreased to 379,000.

Total nonagricultural wage and salary employment decreased, mainly due to seasonally unemployed teachers, by 66,500 in July. When the data are adjusted to eliminate normal seasonal changes increases, total employment increased by approximately 20,000. The seasonally adjusted data reflect that employment in almost all industries has increased since the first part of the year. Average weekly earnings in manufacturing increased from $376.00 in June to $380.00 in July as the average hours worked increased from 39.9 to 40.0 hours per week.

b/ Range as shown is at the 90 percent level of confidence.

HIGHLIGHTS California's seasonally adjusted unemployment rate for August 1983 was 9.8 percent, up from the 9.3 percent in July 1983. The nation's seasonally adjusted civilian unemployment rate was 9.5 percent in August 1983, unchanged from July 1983. During August in California, seasonally adjusted employment decreased by 19,000 over the month to 11,128,000, while unemployment increased by 56,000 to 1,203,000. The number of job losers increased from 668,800 in July to 721,200 in August. However, the nonseasonal rate for prime age workers dropped for the sixth consecutive month to 7.6 percent.

Total nonagricultural wage and salary employment decreased by 59,900 from July to August, due mainly to the Pacific Telegraph and Telephone strike involving approximately 65,000 employees. Employment in manufacturing increased during August but not as much as expected this time of year. Since the first part of the year the growth of employment in manufacturing has been slower than the other major industry groups. The average hours worked per week in manufacturing decreased from 40.0 in July to 39.7 in August; however, the average overtime hours in manufacturing increased from 2.8 to 2.9.
